Music and Mental Health Survey

- Survey of mental health issues in relation to music consumption.

References

- Data collected by catherinerasgaitis using Google Forms and posted on various reddit and discord threads. <https://www.kaggle.com/datasets/catherinerasgaitis/mxmh-survey-results> 1b. Data collected by Adil Shamim from numerous universities

Specifications

- 167.8 kB - 736 obs. of 33 variables - depression, age, music effect 1b. 2.8 MB - 27901 obs. of 18 variables - academic pressure, sleep duration, degree, family history

COVID-19 and its impact on Students

- Survey on different life and education factors for students attending virtual school (self-reported)

References

- Data collected in a study from multiple educational institutions in Delhi National Capital Region – posted on Kaggle 5 years ago (<https://www.kaggle.com/datasets/kunal28chaturvedi/covid19-and-its-impact-on-students>)

Specifications

- 3.140.2 KB - 18 variables (time spent and medium used for virtual school, time spent on tv)

interesting questions

- how medium affected time spent on school, Age vs. more or less connected to family

Student Mental Health

- Student Mental Health Data compiled among various sources regarding students, education, work, and mental health

References

- Data collected by Adil Shamim from numerous universities
<https://www.kaggle.com/datasets/adilshamim8/student-depression-dataset/data> 2. published: 19 December 2023 accepted: 24 November 2023, found from dataIsPlural, but on nature.com

interesting questions

- depression by dietary habits, degree, financial stress, sleep duration, and academic pressure

Partisan and Demographic Information on Local Elections in Missouri

- **Description:** Including information about elections for mayors, city councils, county executives, county legislatures, sheriffs, prosecutors, and school boards, this dataset enables analysis of whether certain politicians reflect the demographic, partisan, and ideological traits of their constituents. Additionally, the dataset supports further research on the factors influencing local elections.
- **Reference:** Who collected it? Justin de Benedictis-Kessner et al. Who distributes it? Scientific Data, [DataInPlural](#) Where is it documented? [Nature.com](#) Scientific Data, [Open Science Framework \(OSF\)](#).
- **Specifications:** 0.671656 MB, 1722 obs. or 32 variables

Variables like the name (ful, first, last), city, state, office consolidated, and district are identified as chr. Variables like year, month, and amount of votes are identified as int. Variables that had the probabilities of sex, race, and political party are indentified as a num from 0-1. However, there are variables like sex, race, and political party that identify as chr that let you know what actual (sex, political party, race) they identify as.

- **Interesting Questions + Potential Graphs:**

Any of the demographic variables (like their population) compared to the city in Missouri (could be a pretty cool state map)

amount of votes per election or per office consolidated

Do politicians represent the demographic, partisan, and ideological characters of their constituents?
 What factors affect local elections?

o
